

Emergency Keypad Terminal Connector

Step 1

Remove keypad from safe door.

Step 2

Snip keypad cable as closely to the keypad as possible to allow sufficient cable to work with.

Step 3

Strip the black sheath to reveal the 4 coloured cables.

Step 4

Strip each of the coloured cables to expose the wire.

Step 5

Depress the Terminal Connector button and allow the sprung-loaded hook to grasp the wire of each of the corresponding coloured cables

Step 6

Connect the cable from a new keypad to the molex port of the Emergency Keypad Terminal Connector. Enter a valid code to open the lock.
